SWC List – Add Toggles .....	6
New SWC Report.....	6
New Shipment Condition of STCC .....	6
Rate Database Report .....	6
426 – Do Not Repeat LO Segment for PW .....	6
N103 Qualifier has Invalid Values .....	6
Revenue by Month Report .....	6
Revenue Waybill Print Problem .....	7
Delete Log.....	7
Activate duplicate 417 if required .....	7
Traffic Analysis Report by Settlement Date .....	7

## **Settled Waybill Report**

*(RMS 1499)*

Waybill totals have been added for each traffic type. Also, a grand total appears at the end of the report.

## **426 – Scale Information Missing for Multi-car**

*(RMS 1639)*

G404 is required for each multi-car 426. Scale date and time fields have been added.

## **Freight Bill Lister**

*(RMS 1685)*

A new ability to search by invoice number has been added to the freight bill lister.

## **Email Results of Auto Batch Rating Report**

*(RMS 1694)*

Ability to email results of auto batch rating report has been added to the scheduler.

## **Trial Balance Extract**

*(RMS 1698)*

The following fields have been added to the end of the Trial Balance Extract:

- customer ID and address type
- shipper ID and address type
- consignee ID and address type
- lead/trailing car indicator.

## **Toggle to Unmatched 417 Lister**

*(RMS 1700)*

A new toggle has been added to display only unrated, only rated, or all waybills. This function allows the ability to list challenged 417s that are in the wait period.

## **Company Material 417s**

*(RMS 1704)*

417s that have the company material indicator flagged with Y will not import into RMS.

## **Restrictions on Creating Child 426**

*(RMS 1705)*

When creating a child from a parent rule 11 with Z, a warning indicator will appear if the 417 is still within the wait period. Freight bill and trial balance will still be created without sending EDI.

## **PER01 Segment**

*(RMS 1709)*

CN is not a valid value for the PER01 segment. This code is present in some 417s that are extracted to RMS; when this occurs, the 426 gets an error message from Railinc. If CN is present in the 417, it must be scrubbed out before the RMS extract. If PER01=CN the PER01, PER02, PER03, and PER04 fields will be cleared.

## **Revenue by Commodity Report**

*(RMS 1715)*

When W is selected, confirm message appears to inform users they are about to print waybills.

## **Add Audit Information to All Rate Files**

*(RMS 1723)*

Entry and modified audit information has been added to files in the rate database.

## **Waybill Tracing Not Handling Multicars Properly**

*(RMS 1725)*

The waybill tracing program has not been tracing multi-car trailers correctly. Trailing cars now appear when a trace is run.

## **Lister Information Missing When Tracing Waybill**

*(RMS 1727)*

When tracing a waybill with a short message concurrence as the last activity, the trace programs cannot determine the correct lister that contains that waybill. The tracing logic now uses the last full message to determine lister.

## **Enhancement to Auto Rating Report**

*(RMS 1732)*

Traffic Type and Rate Type (first L103 freight rate qualifier) have been added to the auto rating report.

## **Freight Bill Reversal Dropping Currency Code**

*(RMS 1738)*

The freight bill reversal program has not been handling the currency code properly. It will now reverse the prior freight bill using the same currency code as on the bill being reversed.

## **Utility for Revenue date or Accounting Period Change**

*(RMS 1741)*

A new system administration utility has been added for changing the revenue date or accounting period for a waybill. The utility includes waybills, trial balance, and freight bills.

## **Protect Revenue Date in Waybill**

*(RMS 1742)*

The revenue date on the waybill screen must be protected if there is an entry. A utility exists in the system administration menu to change this field.

## **RMS/Supertrip Reconciliation**

*(RMS 1744)*

The totals for multi-car shipments in the Supertrip columns have been printing the lead car only. Totals will now be accumulated.

## **Trial Printing of Freight Bills**

*(RMS 1745)*

A new feature has been added to all trial printing of freight bills for modifications before final freight bill run.

## **Rate Data Base – Multiple STCC rate**

*(RMS 1751)*

The ability to rate a car based on multiple STCCs and consider the quantity count has been added. This enhancement includes a new shipment condition of the STCC.

## **ZR10 Dispute Code Overwritten**

*(RMS 1752)*

If two messages for the same URRWIN are processed in the same EDI batch, the ZR10 from the first message overwrites the ZR10 from the later message. With the new release, when the ZR10 values on existing 426s are updated, the last 426 message will be used.

## **SWC List – Add Toggles**

*(RMS 1754)*

Car hire information display has been added to the SWC lister. Toggles have been included to view allow the user to view reclaim, road, and care hire indicator. Method of payment, freight bill party, and rebill point have also been added. All selectable fields are available for search.

## **New SWC Report**

*(RMS 1755)*

A new SWC report has been created. When run on the scheduler, selection criteria for this report now include SWCs by created or modified date.

## **New Shipment Condition of STCC**

*(RMS 1758)*

A new STCC shipment condition that allows for a single STCC or range has been added.

## **Rate Database Report**

*(RMS 1759)*

Modified date has been included as a report option. This report can be scheduled in the scheduler.

## **426 – Do Not Repeat LO Segment for PW**

*(RMS 1767)*

Repetition of the LO segment for ENS charges using the PW qualifier has been disallowed.

## **N103 Qualifier has Invalid Values**

*(RMS 1769)*

The entry screen for the names file has allowed invalid entries to be entered in the N103 qualifier field. With this release, the only valid value is C5.

## **Revenue by Month Report**

*(RMS 1770)*

A sort by method of payment for traffic types has been added to the Revenue by Month report.

## **Revenue Waybill Print Problem**

*(RMS 1771)*

Revenue waybill print for a single car no longer prints the seals under the heading of trailing cars seals.

## **Delete Log**

*(RMS 1775)*

A new search by User ID has been added.

## **Activate duplicate 417 if required**

*(RMS 1779)*

If the equipment initial or number is changed in TMS after the 417 is extracted and rated in RMS, currently the 417 errors as a duplicate. RMS now has the ability to activate or force the 417 into the active waybill lister for rating on the 417 error lister.

## **Traffic Analysis Report by Settlement Date**

*(RMS 1786)*

The Traffic Analysis report now correctly selects reports when run by settlement date.
